

Communispond™

THE VIRTUAL CLASS EXPERIENCE

CLASSES OFFERED:

Executive Presentation Skills® Anywhere • Sales Presentation Skills® Anywhere • *More to come!*

Let the classroom come to you with virtual instructor-led training.

We've adapted our signature courses to create a truly unique virtual class experience where our award-winning classes are delivered in a virtual environment. Now, students and instructors can connect at any distance.

● ENGAGING

The Communispond virtual class experience is highly engaging and interactive. From the moment students log in to class, they are immediately conversing live with instructors and other colleagues in the class. Regular engagement continues throughout the entire class, keeping students involved to maximize learning.

● CONVENIENT AND COST EFFECTIVE

Students have the ability to take a virtual class anywhere an Internet connection is available. This is the perfect opportunity for global teams to take advantage of a consistent training rollout without the need to travel. The virtual solution also offers organizations a cost effective option. By offering our world-renowned classes virtually, it dissolves all barriers of **TIME**, **LOCATION**, and **COST** that typically exist with an in-person class.

● WORLD-CLASS INSTRUCTORS

We understand that consistency is key across corporate training programs. That's why each member of our faculty undergoes a rigorous certification process – one of the toughest in the industry. This leads to consistent delivery of content, coaching, and skill development across global organizations. Our world-class team of certified faculty that teach our in-person classes have gone through additional certifications to teach our virtual courses.

● IN-THE-MOMENT COACHING

Because our virtual classes are held with an instructor in real-time, participants receive in-the-moment coaching, just as they would in person. During class, students are recorded and coached live and receive live feedback on their skills. With in-the-moment coaching students are able to see and hear exactly how they did so they can determine what is effective, and what they need to practice.

● DEDICATED TECHNOLOGY SUPPORT

Technology support is inevitably needed when working with people with varying technology comfort levels. If a technical issue arises, there is no need to worry. Every class has a dedicated technical/trainer's assistant so technical issues won't bog down the entire class.
